SUMMARY

Strong foundation in problem-solving, analytical thinking, and technical concepts, with the ability to understand complex problems and develop practical solutions. Adaptable, detail-oriented, and committed to continuous learning and professional growth. Eager to apply technical and analytical skills to solve real-world business challenges and contribute effectively in a professional environment.

EDUCATION

Bachelor of Computer Application (BCA)

2022-2025

JH Patel Institute of Management and Technology, Davangere, Karnataka

Pre-university Course

2020-2022

GM Institute of Technology, Davangere, Karnataka

SKILLS

- **Programming:** Python, Pandas, NumPy
- **SQL & Databases:** SQL, Joins, Subqueries, CTEs, Window Functions, Aggregate Functions, MySQL, Relational Database Concepts
- **Analysis & Modeling:** EDA, Statistical Analysis, Feature Engineering, Regression, Classification, Clustering, Predictive Modeling, Model Evaluation, Scikit-learn
- **Processing & Pipelines:** Data Cleaning, Data Transformation, Data Preprocessing, ETL/ELT Concepts, Batch Processing, Pipeline Fundamentals, Data Validation
- **Warehousing & Architecture:** OLTP & OLAP Basics, Fact & Dimension Tables, Star Schema, Snowflake Schema, Data Warehousing Fundamentals

PROJECTS

1. Apple Products Price Prediction | Python, ML ([GitHub Link](#))

Developed ML models (**Logistic Regression, Random Forest, XGBoost**)

- Built complete pipeline: EDA → feature engineering → model training → evaluation.
- Metrics: MAE, RMSE, R2_Score
- keep the tuned XGBoost (Achieving $R^2 = 0.8699$, CV $R^2 = 0.8675$, MAE $\approx ₹11,198$, RMSE $\approx ₹16,308$).

2. Fraud Transaction Analysis + Transaction Segmentation | Python, ML ([GitHub Link](#))

Performed classification + clustering to detect fraudulent transactions, identify transaction patterns.

- Compared ML models for fraud detection, handling severe class imbalance using **SMOTE**
- Optimized **XGBoost** using hyperparameter and threshold tuning, achieving **0.439** recall.
- Applied **K-Means** clustering and **PCA** for transaction segmentation.

3. Bus Ticket Demand Forecasting – Predictive Modelling | Python, Pandas, Matplotlib ([GitHub Link](#))

Analyzed route trends, booking patterns, built forecasting models to predict seat demand.

- Implemented **Regression, Time-series** trend decomposition.
- Used one-hot encoding and chronological validation to prevent future-data leakage.

4. E-Commerce Delivery Performance Analysis | Power BI, DAX, Power Query ([GitHub Link](#))

Analyzed 100K order records across **JioMart**, Swiggy **Instamart**, and **Blinkit** to compare delivery efficiency.

- Leveraged Power Query and DAX for data transformation and calculated metrics.
- Built an interactive Power BI dashboard with platform-wise KPIs.

CERTIFICATIONS

Postgraduate Program in Data Science and Analytics with GenAI (Imarticus Learning)

Complete Data Analyst Bootcamp From Basics To Advanced (Udemy)
